

Verify user receives a “forgot password” email with a link to change password

- Given user has an active account
- When user request a password reset using his email address
- Then user receives an email address with a link to change his password
- And user is redirected to re-send email

Verify user is able to change password with the link provided by “forgot password”

- Given user receives a forgot password email with a link to change password
- When user accesses the link
- And change his password
- Then password is changed
- And user can login with new password

Verify mandatory fields on changing password

Verify link for restore password expires after “X” minutes * do not know for how long is valid.

Verify user can use an already used link for restore password * this is current functionality
